Unsave Smart Contract / Blockchain Developer (Solana / Solidity) at TYMLEZUnsave

## About Us

TYMLEZ (ASX:TYM) supports enterprises via solutions developed to accelerate adoption and integration of bleeding-edge technologies in order to enhance and modernise legacy systems.

TYMLEZ has a particular focus on Green Energy and Decarbonisation initiatives, especially with how Blockchain can help facilitate improved interoperability between consumers, prosumers and grid infrastructure, including provenance of green energy from producing assets.

## About You

A team player who is passionate about their craft, you are the kind of person who enjoys contributing to open source and releasing tools and libraries to the public, writing about your experiences (wins and losses). You are the kind of person who contributes on Stack Overflow, Writes on Medium, has a public Github etc - you are not afraid to put yourself out there.

## About the Role

You will have the option to dip your toes into many different technologies, mostly greenfield projects and you get to do some real good by helping advance the uptake of Green Energy in Australia (and the world).

We are no strangers to remote work, we would consider a 100% remote role for this as long as timezones work, we have an office in Melbourne CBD (WeWork), we get together 2 days a week to ensure synchronisation on projects where there is a lot of information exchange needed.

## 2 Stage Interview process

We are developers too, long winded, bureaucratic interview processes are not something we will ever do. There will be a primary informal chat first if we think there is a good match, and there will be a second Technical Interview where we ask you to talk us through a project you have written that you are particularly proud of.

We don't believe in Code Tests, but we do insist on demonstrable experience via some form of public profile, this lends itself neatly to the kind of person we are looking for.

**Requirements**

- **Demonstrable**\* 2+ years experience on Solidity (ideally for a released project that can be talked through)
- **Demonstrable**\* 2+ years React & Redux / Vue.js experience
- **Demonstrable\*** Solana & SPL experience / or understanding + Solidity and Rust experience.
- **Other relevant experience around coding distributed and decentralised architectures.**
- API integration experience including OpenAPI / Swagger definitions.
- Hands on exposure to AWS products (EC2 / ECS, Lambda, DynamoDB, SQS, S3)
- Familiar with CI/CD, and managing deployment pipelines using Github Actions
- Strong Git experience including branching & PR workflows (e.g. git-flow)
- PM Tool experience (JIRA, Github issues)
- Collaborative attitude, Great communicator & problem solver
- Has worked in distributed teams in the past and understands expectations with remote work

# Bonus Experience

Whilst not requirements for the role these would be beneficial to your application:

- Blockchain / Solidity / Smart Contract experience
- Python experience
- ETL & Data engineering knowledge (AWS Glue, Airflow, BigQuery)
- Google Cloud Platform Experience
- Docker / Kubernetes experience

**Benefits**

- Above market rate salary plus Super + perks
- Employee Share Scheme
- Participate in industry events around Blockchain and the developer community.
- A culture of openly sharing what you are doing / contributing to Open-Source products we use / learning new things / geeking out about what we are doing
- A high degree of Autonomy and Flexibility - there is more to life than work.
- Work, learn and tech alongside an incredibly high-performance team
- WeWork membership at 222 Exhibition Street (Amazing free coffee, Free Beer & Cider, games rooms, pizza nights, wellness etc)

# *Demonstrable Experience

We are all technologists, unfortunately if you don't have a fairly well stocked public Medium / Github / Bitbucket / Gitlab / Stackoverflow etc then it is much harder for us to gain an understanding of the kind of developer you are and we refuse to do code tests for senior roles.

We generate so much code in our daily lives as developers that we find it very hard to accept when told there is nothing to showcase. It doesn't necessarily have to be code, but blog posts, musings, anything that shows your ability to talk on a subject is valuable information.
